Advisory Action Before the Filing of an Appeal Brief

Part of Paper No. 20070817

Continuation of 13. Other: 1. First of all, page 22 of applicant's Remarks stated "In the event the restriction requirement is maintained, Applicants preliminarily elect Inventions II (claims 1-31) solely because MPEP § 821.03 requires such an election if the restriction requirement is maintained."

Examiner response:

It appears that the applicant elected claims 1-31; these elected claims 1-31 are cancelled by applicants, thus no argued claims to response to since applicant elected cancelled claims. Nonetheless, the examiner will have a response for the main arguments. Page 25 of the Remarks, the applicant argues "Inventions classified as combination and subcombination claims are related; "[a] combination is an organization of which a subcombination or element is a part" The examiner directs applicant attention to Final action mailed on 6/27/2007, wherein the restriction is based on subcombination usable together NOT "combination-subcombination" as argued. Looking throughout the argument in the remarks, the applicant repeatedly argues different restriction types but did not focus on the main restriction "subcombination usable together".

MPEP 806.05(d) stated: "Two or more claimed subcombinations, disclosed as usable together in a single combination, and which can be shown to be separately usable, are usually restrictable when the subcombinations do not overlap in scope and are not obvious variants. To support a restriction requirement where applicant separately claims plural subcombinations usable together in a single combination and claims a combination that requires the particulars of at least one of said subcombinations, both two-way distinctness and reasons for insisting on restriction are necessary. Each subcombination is distinct from the combination as claimed if: (A) the combination does not require the particulars of the subcombination as claimed for patentability (e.g., to show novelty and unobviousness), and (B) the subcombination can be shown to have utility either by itself or in another materially different combination." Since the restriction is directed to subcombinations usable together, there is no combination involved. Thus, the requirement for restriction is that the subcombination can be shown to have utility by either itself or in another materially different combination. In this instance case, invention I is directed to encoding e-mail addresses that can be used in an e-mail security mechanism while invention II is directed filtering e-mail messages. Although the two inventions are usable together, they are still restrictable as defined by MPEP under subcombination usable together MPEP 806.05(d)...
